A zipped file with all data and replication script is available at: https://www.dropbox.com/sh/mzb6aaf7d7rl3wi/AAD00_gx-7SesmbiPXiP5aJ4a?dl=0

Note: once the DA-RT folder is downloaded, open the script file “0 - run this script file to replicate.R” within the “Code” folder. Change the setwd() line as necessary to set the appropriate working directory, and then run the file. It will create subfolders for all tables and figures.
