### To whom it may concern

This is to confirm that the project "5 year results of EVAR used according to instructions for use gives a good general outcome for AAA" with Erney Mattsson as the principal investigator has been evaluated with the intention to decide if the project needs a full ethical review by the committee. The project was found to be a quality assurance project that does not require a full ethical review according to Norwegian Health Research Act § 2.

Yours sincerely,

Hilde Eikemo  
Head of Secretariat
