

Supplemental Material

Table S1

Summary of multiple regression analysis for variables predicting estimated drug effectiveness (n = 251).

Included	B (SE)	95% CI for B		β	p
		Lower	Upper		
constant	51.06 (4.21)	42.78	59.35		<.001
none vs. positive	6.11 (6.28)	-6.26	18.48	0.12	.332
none vs. negative	-3.89 (6.83)	-17.34	9.57	-0.08	.570
stats experience	0.51 (0.47)	-0.42	1.44	0.10	.280
none vs. positive*stats experience	-0.52 (0.69)	-1.88	0.85	-0.10	.456
none vs. negative*stats experience	-0.43 (0.85)	-2.11	1.25	-0.07	.614
<i>Note.</i> Multiple $R^2 = 0.032$, Wherry's adjusted $R^2 = 0.013$. Model $F(5, 245) = 1.63$, $p = .152$.
