<b>Fingolimod</b>	-0.3	0.62	1135 (329-1462)	5/6

**Supplementary table: Correlation of treatment duration and immunoglobulin G concentration**

Spearman's Rho correlation was used. <sup>§</sup>: Duration between therapy start and serum immunoglobulin sampling. \*: Injectables: Interferons and glatiramer acetate. <sup>+</sup>: Patients were indexed as having received corticosteroids if administered intravenously  $\leq 4$  weeks before blood sampling.
