Legend: Data is from Zeisel et al. Genes are ordered such that they match the order of Figure 1. P values are represented as follows *** ≤ 0.001 ; ** ≤ 0.01 ; * < 0.05 . Values that were non-significant ($p \geq 0.05$) are left blank). Abbreviations: Ast. = Astrocytes, Olg = Oligodendrocytes, Exc = excitatory neurons, Inh = Inhibitory neurons, Mcg = microglia, Sgl = satellite glia, Sch = Schwann cells, Nor = sympathetic noradrenergic, Cho = sympathetic cholinergic, Pep = peptidergic nociceptive, Nf = neurofibrillary nociceptive, Np = non-peptidergic nociceptive, Lep = vascular leptomeningeal, Smt - vascular smooth muscle, End = Vascular endothelial. Eight genes (*REST*, *YAP*, *APH1A*, *NOC3L*, *PRPF3*, *TBC1D12*, *USP9X*, *TRPM8*) are included which did not meet the cutoff for the Zeisel et al. dataset, but which did meet the cutoff for the TG dataset. Although these genes were included in the heatmaps as well as the supplementary tables, they were not included in the quantitative description of results of the Zeisel et al. dataset.
