
Supplementary Fig. 2. Short-term plasticity of RHT and SCN ventral neurons. Percentage of SCN ventral neurons that showed STF (gray boxes) or STD (white boxes) by RHT electrical stimulation at 2 Hz (A), 5 Hz (B), 10 Hz (C), 20 Hz (D), and 50 Hz (E). The number of neurons that displayed each type of plasticity is indicated in parenthesis. At the right of the graphs, representative current traces illustrating the dominant short-term plasticity for the three studied postnatal stages are shown. Arrows indicate when the electrical stimulation was applied.
