

**Appendix Table A1. Patients with Minimum 2-Year Follow-Up – Univariate Analysis and Multivariate\* Cox Proportional Hazards Regression**

Demographic	<b><u>n = 3,395</u></b>		P-Value
	Patellar Tendon	Hamstring Tendon	
Overall Sample	639	2,756	
Revision ACL Reconstruction			
n	18	122	0.065
%	2.8%	4.4%	
Hazard Ratio* (95% CI)	Reference	2.09 (1.25 - 3.48)	<b>0.005</b>
Contralateral ACL Reconstruction			
n	21	41	0.002
%	3.3%	1.5%	
Hazard Ratio* (95% CI)	1.91 (1.08 - 3.39)	Reference	<b>0.027</b>

\*Adjusted Cox regression analysis was performed with the following factors entered into the model: Age, sex, time to surgery, activity at time of injury, medial and lateral meniscal treatment and pre-operative Marx score
