

Appendix

Table A1: Logistic regression of compliance regarding automated and manual data collection on respondent characteristics including interactions

	Compliance	
	Coefficient	Robust standard error
question type automated	-4.29 ***	0.96
Female	-0.15	0.13
Age	-0.01	0.01
Single household	1.92 **	0.97
East Germany	0.34 *	0.18
Medium education	-0.65	0.63
High education	-0.35	0.68
Neuroticism	0.02	0.80
Agreeableness	0.28	0.25
Extraversion	0.50 ***	0.18
Conscientiousness	-0.02	0.08
Openness	-0.29	0.21
Location: at work	-0.93	0.66
Location: outside	-1.07 *	0.58
Private computer use: every day	0.26	0.31
Private computer use: every week	-0.08	0.31
Private computer use: every month	0.33	0.36
question type automated * age	0.03 **	0.01
question type automated * single household	-2.19 **	0.97
question type automated * medium education	0.34	0.62
question type automated * high education	-0.07	0.67
question type automated * agreeableness	-0.08	0.25
question type automated * extraversion	-0.49 ***	0.18
question type automated * openness	0.44 **	0.21
question type automated * at work	0.56	0.69
question type automated * outside	0.69	0.63
Constant	2.62 **	1.04
N	2136	
McFadden's pseudo R ²	0.25	

Notes: Standard errors are clustered by PSU, household, and respondent.
