

Supplementary Figure 1

Dectin-1

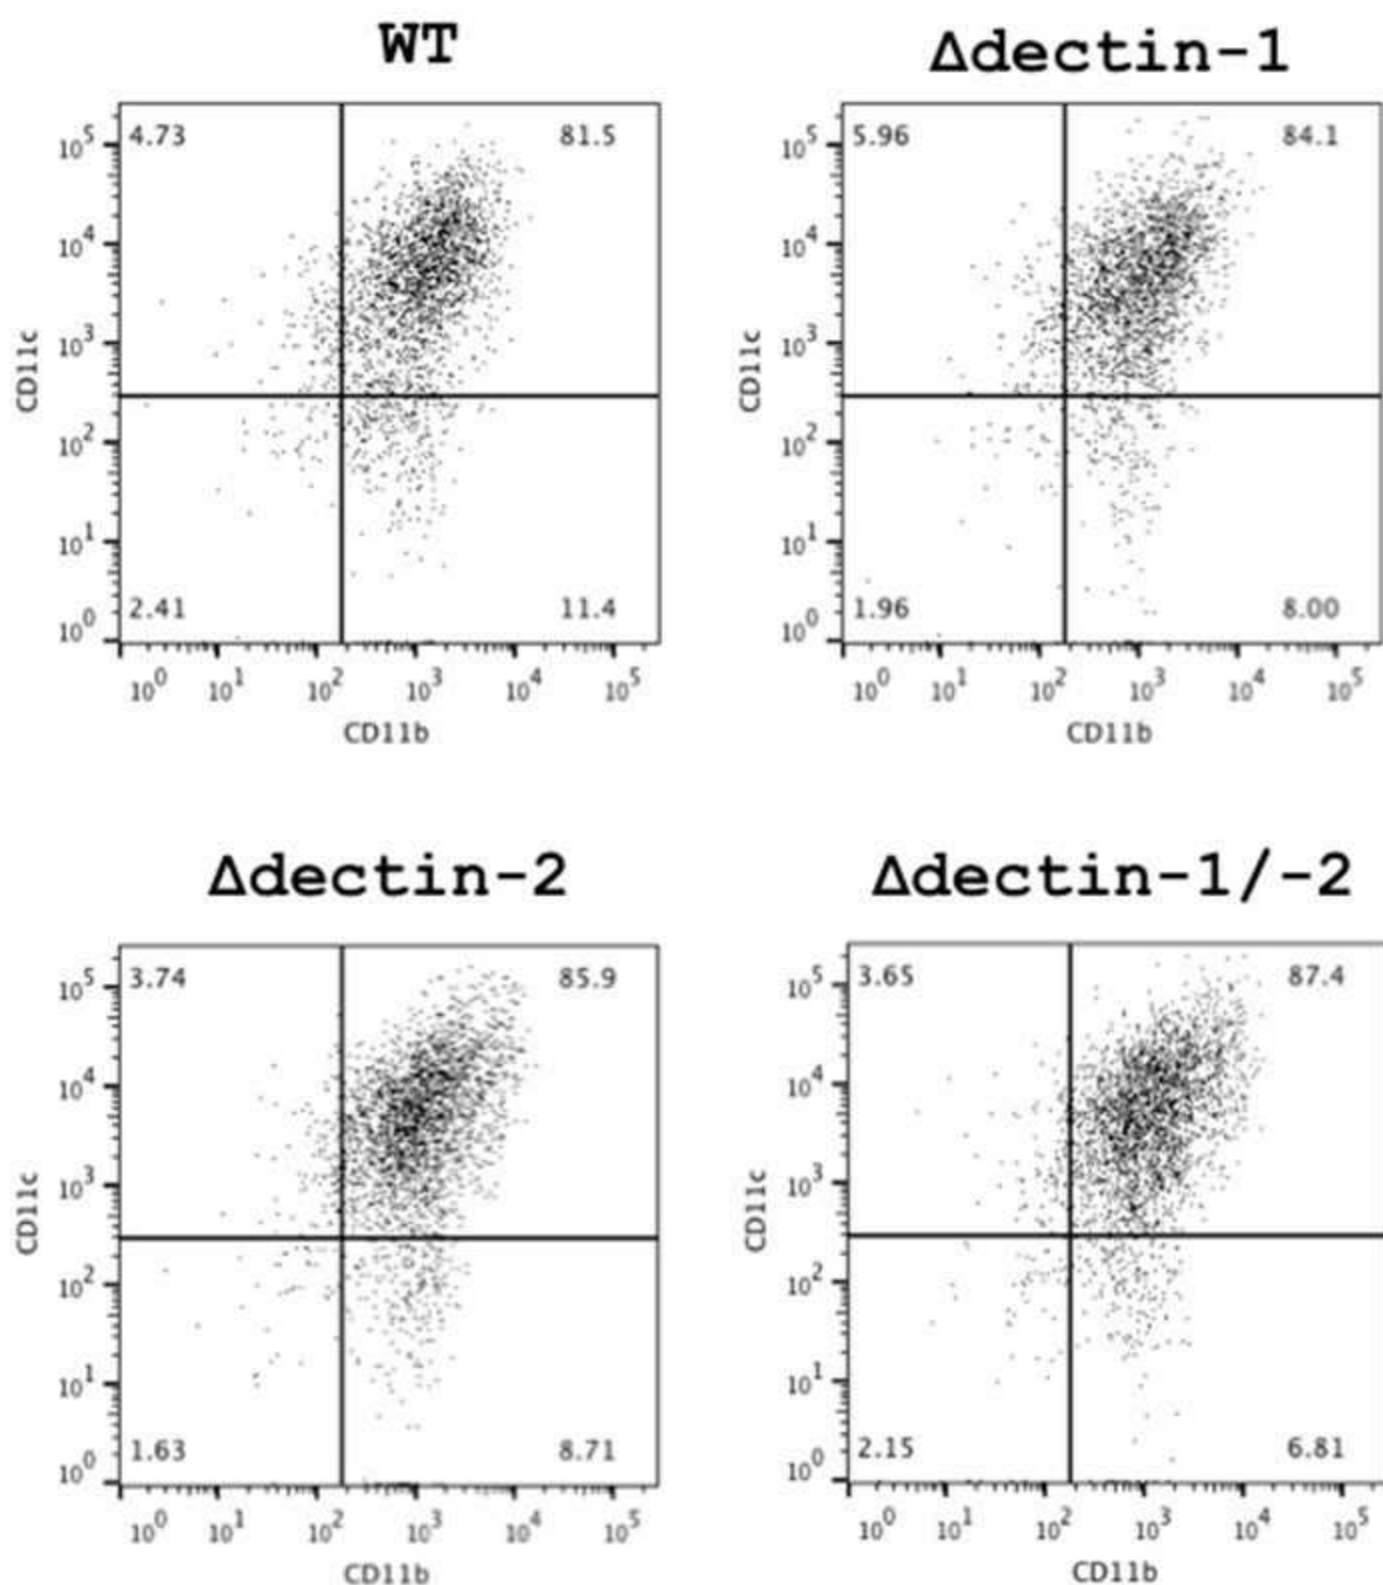

Dectin-2

Supplementary Figure 1. Characterization of dko [dectin-1/dectin-2 deficient] mice. DKO mice were produced by crossing each singly deficient (dectin-1 and dectin-2 ko) mice. Cell surface expression of dectin-1 and dectin-2 on BMDCs. BMDCs were produced as described in the **Materials and Methods** section and analyzed by FACS after staining with anti-dectin-1 antibody (AbD Serotec) [upper panel] or anti-dectin-2 antibody (MACS) [lower panel].

Supplementary Figure 2

Supplementary Figure 2. Phenotyping of BMDCs by FACS. BMDCs were produced as described in the Materials and Methods section and analyzed by FACS after staining with anti-CD11b antibody and anti-CD11c antibody (Biolegend)
