

JVDI: Supplementary material

Wade B, et al. Two putative zinc metalloproteases contribute to the virulence of *Clostridium perfringens* strains that cause avian necrotic enteritis

Supplementary Table 1. Oligonucleotide primers.

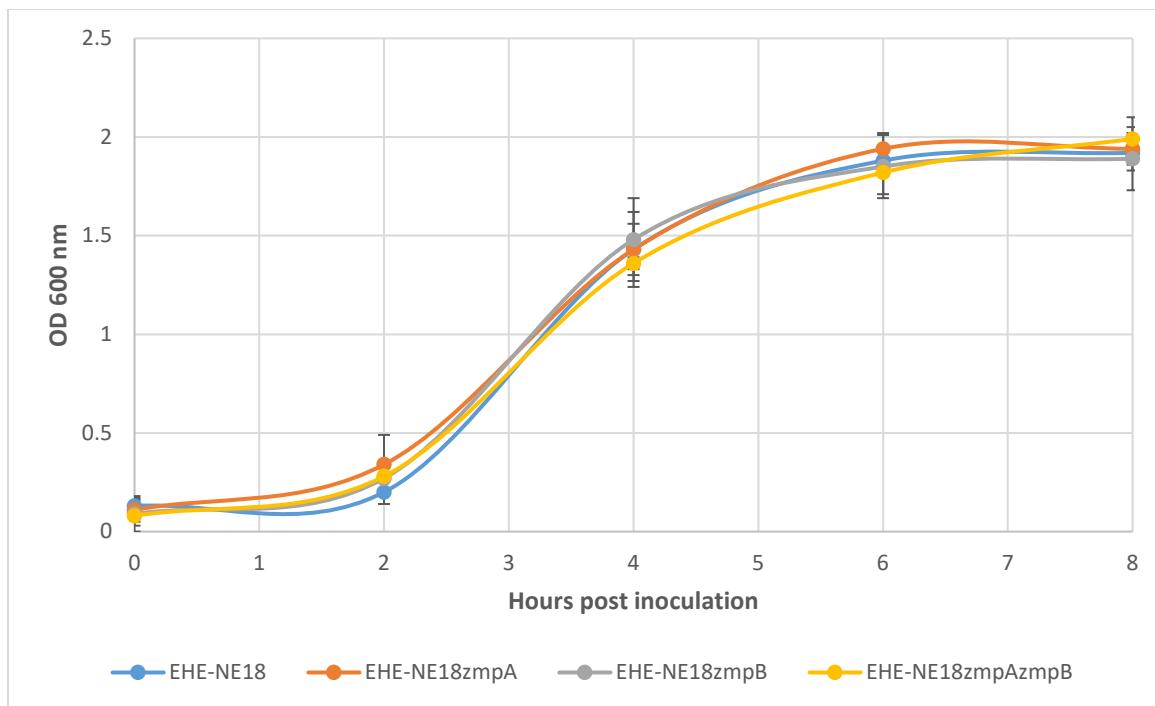

Combination	Target	Product size (bp)	Sequence (5'-3')	Source
1	<i>zmpB</i> (EHE-NE18_1611)	107	F: CTTTCTGCTACAACAATTGATG R: TTACTTACCCCTTGCTTGATG	Current study
2	<i>zmpA</i> (EHE-NE18_3281)	377	F: AGGTTCCGGTAGCGTAAG R: TAGCGTTGCCAGTCAG	Current study
3	<i>zmpA</i> downstream flanking region	2,168	F: CCGACTAGTATTATCAAGAAGGCAGATGG R: CCGACTAGTGTCAAGCATATTACAGAAC	Current study
4	<i>zmpA</i> upstream flanking region	2,586	F: ATCAGCTCATACTGGTCTTAC R: GCTAGCCAACATTGCTCTTAAGTTTC	Current study
5	Upstream and downstream of <i>zmpA</i>	9,456 (wild-type); 5,917 (mutant)	F: AGGTGTTGGAGTTATAGATG R: TTTCCTACAACCTTAAATTTC	Current study
6	Upstream of <i>zmpA</i> and within <i>catP</i>	No product (wild-type); 3,306 (mutant)	F: AGGTGTTGGAGTTATAGATG R: CGCCATTCAAGAGTTAGGAC	Current study
7	Downstream of <i>zmpA</i> and within <i>catP</i>	No product (wild-type); 3,021 (mutant)	F: CGGCAAATGTGAAATCCG R: TTTCCTACAACCTTAAATTTC	Current study
8	<i>zmpB</i> TargetTron Construct	Final product 353	IBS: AAAAAAGCTTATAATTATCCTACATCACC ATGACGTGCGCCCAGATAGGGTG EBS2: TGAACGCAAGTTCTAATTTCGGTTGATGT CGATAGAGGAAAGTGTCT EBSU: CGAAATTAGAAACTTGCCTTCAGTAAAC EBS1D: CAGATTGTACAAATGTGGTGATAACAGATA AGTCCATGACTATAACTACCTTCTTGT	11

9	flanking <i>ermB</i> insertion site in <i>zmpB</i> mutant	366 (wild-type); ~2,200 (mutant)	F: AGATGAGGGAGATGATTAAATTTAG R: GCCTTAGTAGGATTCTCAGAAGTTTC	12
10	Upstream of <i>cpe2358</i>	648	F: CGCATCAGATATTATTATTTC R: CTATTCAGAACGCCTTATTAAC	Current study
11	Partial coding sequence of <i>cpe2358</i>	585	F: TGATTTACTCCATGTATT R: CTATTTACTAACGCCAACTC	Current study
12	Partial coding sequence of <i>cpe2358</i>	641	F: GGTATTGTTGTTATAGATATAG R: TTCTTGTTCAAGATTATTTAG	Current study
13	Partial coding sequence of <i>cpe2358</i>	697	F: AAACGGTATAAATGTTATAAG R: GATTAATACCTAACAGACATTAAG	Current study
14	Partial coding sequence of <i>cpe2358</i>	822	F: AATGCAAGTTAAACTCCTTAG R: CAATACAAGAGCAATTAATAG	Current study

Supplementary Table 2. Single-nucleotide polymorphisms present in EHE-NE18*zmpA* and EHE-NE18*zmpB*.

Gene affected	Strain 13 equivalent	Nature of change	Position (aa)
EHE-NE18 <i>zmpA</i>			
Methyltransferase, UbiE/COQ5 family	<i>CPE0887</i>	Substitution (L to I)	110
Alcohol dehydrogenase, short-chain family	<i>CPE2074</i>	Substitution (D to E)	302
EHE-NE18 <i>zmpB</i>			
Queuine tRNA-ribosyltransferase	<i>CPE1945</i>	Substitution (A to S)	15
Sensory box protein/sigma-54 dependent transcriptional regulator	<i>CPE2358</i>	Substitution (A to S)	54

aa = amino acid.

Supplementary Figure 1. Growth curves of EHE-NE18 and selected isogenic mutants. Strains were grown in liquid brain–heart infusion with optical density (OD) recorded at 600 nm every 2 h. Growth curves were repeated in duplicate. One-way ANOVA showed no significant difference in growth at any time.
