

**Supplementary Table 2.** Mediation analysis predicting tau in FD with age and sex covariates

	Effect	95% CI	SE	<i>t</i>	<i>p</i>
Total effect	0.09	[0.03, 0.16]	0.03	2.98	.004
Direct effect	0.08	[0.01, 0.14]	0.03	2.41	.018
ADHD diagnosis → Omission errors	2.84	[0.42, 5.26]	1.22	2.32	.022
Omission errors → Tau in FD	0.01	[0, 0.01]	0.00	2.76	.007
	Effect	Bootstrap 95% CI	Bootstrap SE		
Total indirect effect	0.02	[0, 0.05]	0.01		

*Note.* Coefficients for the model testing the mediating effect of omission errors on the relationship between ADHD diagnosis and tau in framewise displacement (FD) with age and sex covariates. 95% confidence intervals (CI) for indirect effect based on 5000 bootstrap samples. SE, standard error.
