DMT: disease-modifying therapy; IM: intramuscular; SC: subcutaneous; SD: standard deviation.

A 28-day month was used for this analysis.

^aDMT start is reported as month and year, not as a specific date. If the year and month of subsequent DMT start and natalizumab discontinuation were the same, washout time was recorded as 1 day.

^bIf DMT use was ongoing, the last visit date was included as the end date.

^cIncludes mitoxantrone (*n*=3941), azathioprine (*n*=2422), cyclophosphamide (*n*=2425), cyclosporine (*n*=1), rituximab (*n*=4216), methotrexate (*n*=23), and cladribine (*n*=3).
