

Veterinary Pathology: Supplemental Materials.
Silvestri et al. E-cadherin expression in canine melanocytic tumors:
histological, immunohistochemical and survival analysis.

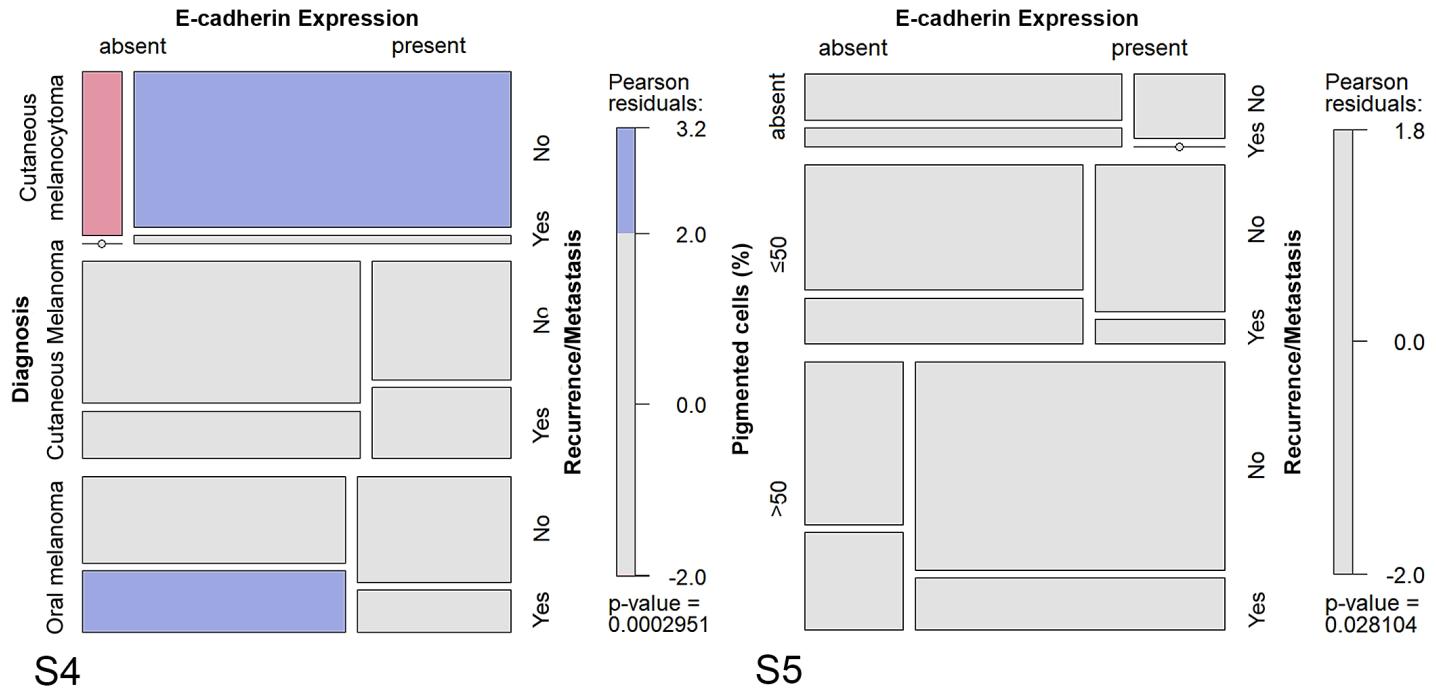

Supplemental Figure S1. Normal skin, dog. Immunohistochemistry for E-cadherin. Epidermal keratinocytes showed the typical E-cadherin pattern (clearly membranous and more intense in the basal layers); the dermis shows no immunolabeling (negative internal control).

Supplemental Figure S2-S3. Kaplan-Meier curves for E-cadherin expression. The vertical thin dashes represent censored patients. **Figure S2a.** Overall survival time according to the 3-tier classification system ($P=0.336$). **Figure S2b.** Overall survival time according to the 2-tier classification system ($P=0.072$). **Figure S3a.** Disease-free survival time according to the 3-tier classification system ($P=0.335$). **Figure S3b.** Disease-free survival time according to the 2-tier classification system ($P=0.462$).

Veterinary Pathology: Supplemental Materials.
Silvestri et al. E-cadherin expression in canine melanocytic tumors:
histological, immunohistochemical and survival analysis.

S4

S5

Supplemental Figure S4-S5. Mosaic plots and log-linear model analysis results (based on Pearson chi-square statistic). Box dimensions are proportional to the number of subjects in each category. Boxes in blue indicate observed frequencies higher than expected in the independence model, while those in red indicated a frequency lower than expected (light blue or light red: $P<0.05$); gray boxes indicate no differences between observed and expected frequencies. **Figure S4.** E-cadherin expression (2-tier classification system), diagnosis and presence of recurrence/metastasis. **Figure S5.** E-cadherin expression (2-tier classification system), percentage of pigmented cells and presence of recurrence/metastasis.

Veterinary Pathology: Supplemental Materials.

Silvestri et al. E-cadherin expression in canine melanocytic tumors: histological, immunohistochemical and survival analysis.

Supplemental Table S1. Comparison of the associations of E-cadherin expression with histological features, clinical outcome and recurrence/metastasis among the classification systems used.

FEATURES	Percentage of positive neoplastic cells	EXPRESSION OF E-CADHERIN

Veterinary Pathology: Supplemental Materials.

Silvestri et al. E-cadherin expression in canine melanocytic tumors: histological, immunohistochemical and survival analysis.

^aSpearman correlation coefficient, Kruskal-Wallis test, chi-square test or Fisher's exact test. Values in bold are statistically significant ($\alpha=0.05$). When $P>0.05$, no multiple comparisons were performed (no letters displayed). Groups not sharing any superscript lowercase letter represent subsets whose medians or **rows** proportions are significantly different after multiple comparisons and Bonferroni correction ($P\leq0.05$).

^a overall P value from Wald statistics.

Veterinary Pathology: Supplemental Materials.

Silvestri et al. E-cadherin expression in canine melanocytic tumors: histological, immunohistochemical and survival analysis.

Supplemental Table S4. First independence model. The table shows the results regarding the log linear model between E-cadherin expression (2-tier classification system), histological diagnosis and clinical outcome.

N°	Log linear Model ~ Histological diagnosis + E-cadherin expression + Clinical Outcome	Clinical outcome	Diagnosis	E-cadherin expression (n)		Pearson chi-square statistic		
				Absent	Present	χ^2	df	P value
1	~ Histological diagnosis + E-cadherin expression + Clinical Outcome	Favorable	Cutaneous melanocytoma	2 (7.1)	19 (7.9)	56.062	7	9.178 e⁻¹⁰
			Cutaneous melanoma	16 (9.1)	6 (10.2)			
			Oral melanoma	2 (7.4)	5 (8.3)			
		Unfavorable	Cutaneous melanocytoma	0 (2.8)	0 (3.2)			
			Cutaneous melanoma	3 (3.6)	2 (4.1)			
			Oral melanoma	10 (3.0)	5 (3.3)			

In the table, the absolute frequencies are shown. The expected frequencies are in brackets.

Values in blue have an observed frequency higher than expected if the model fitted ($P<0.05$); values underlined in blue have an observed frequency higher than expected ($P<0.0001$).

Veterinary Pathology: Supplemental Materials.

Silvestri et al. E-cadherin expression in canine melanocytic tumors: histological, immunohistochemical and survival analysis.

Supplemental Table S5. Second independence model. The table shows the results regarding the log linear model between E-cadherin expression (2-tier classification system), histological diagnosis and presence of recurrence/metastasis.

N°	Log linear Model	Recurrence/ Metastasis	Diagnosis	E-cadherin expression (n)		Pearson chi-square statistic		
				Absent	Present	χ^2	df	P value
2	~ Histological diagnosis + E-cadherin expression + Recurrence/Metastasis	No	Cutaneous melanocytoma	2 (7.5)	18 (8.5)			
			Cutaneous melanoma	12 (8.6)	5 (9.8)			
			Oral melanoma	7 (6.8)	5 (7.7)			
		Yes	Cutaneous melanocytoma	0 (2.3)	1 (2.6)	27.293	7	2.950 e ⁻⁴
			Cutaneous melanoma	4 (2.6)	3 (3.0)			
			Oral melanoma	5 (2.1)	2 (2.4)			

In the table, the absolute frequencies are shown. The expected frequencies are in brackets.

Values in blue have an observed frequency higher than expected if the model fitted ($P<0.05$); values in red have an observed frequency lower than expected ($P<0.05$).

Veterinary Pathology: Supplemental Materials.

Silvestri et al. E-cadherin expression in canine melanocytic tumors: histological, immunohistochemical and survival analysis.

Supplemental Table S6. Third independence model. The table shows the results regarding the log linear model between E-cadherin expression (2-tier classification system), percentage of pigmented cells and clinical outcome.

N°	Log linear Model	Clinical outcome	Pigmentation (%)	E-cadherin expression (n)	Pearson chi-square statistic				
					Absent	Present	χ^2	df	P value
3	~ Percentage of Pigmented Cells + E-cadherin expression + Clinical Outcome	Favorable	Absent	1 (3.0)	1 (3.4)	23 (13.6)	35.732	7	8.142 e⁻⁶
			$\leq 50\%$	11 (8.4)	6 (9.4)				
			> 50%	8 (12.1)					
			Absent	<u>6 (1.2)</u>	1 (1.4)				
		Unfavorable	$\leq 50\%$	5 (3.4)	3 (3.8)				
			> 50%	2 (4.8)	3 (5.4)				
			Absent	<u>1 (1.4)</u>	1 (1.4)				
			$\leq 50\%$	5 (3.4)	3 (3.8)				

In the table, the absolute frequencies are shown. The expected frequencies are in brackets.

Values in blue have an observed frequency higher than expected if the model fitted ($P<0.05$); values underlined in blue have an observed frequency higher than expected ($P<0.0001$).
